

ACME TimeTrack - Sample User Guide

ACME TimeTrack - Sample User Guide (FICTIONAL / for demo only)

This document is entirely fictional and contains no real company data.

1. Overtime Alert Email

The system sends an overtime alert email to managers when an employee's monthly overtime exceeds a configured threshold (e.g. 30 or 45 hours).

Recipients with the General Affairs or System role receive all-department information; a Section Manager receives only their own department's data.

Thresholds are set during initial configuration.

2. Roles and Permissions

Roles: General, Section Manager, General Affairs, System.

Correcting attendance records is available to Section Manager, General Affairs, and System roles; General users cannot unless explicitly enabled.

3. Work Schedules and Night Hours

Night-time hours between the configured start and end are counted as 'night' hours, and are counted in addition to work and overtime hours.

Break periods are excluded from working-hour totals.
